

# Self-Custody Wallet for Hurricane Relief

Designs used for a self-custody wallet app providing faster relief to hurricane victims.

# Self-Custody Wallet Design Samples

## PROJECT SUMMARY

The purpose of this project was to investigate the practicality of providing relief to hurricane victims using cryptocurrency via a self-custodial wallet for a coastal state county. These designs provided ideas on the potential look and feel of the app interface.

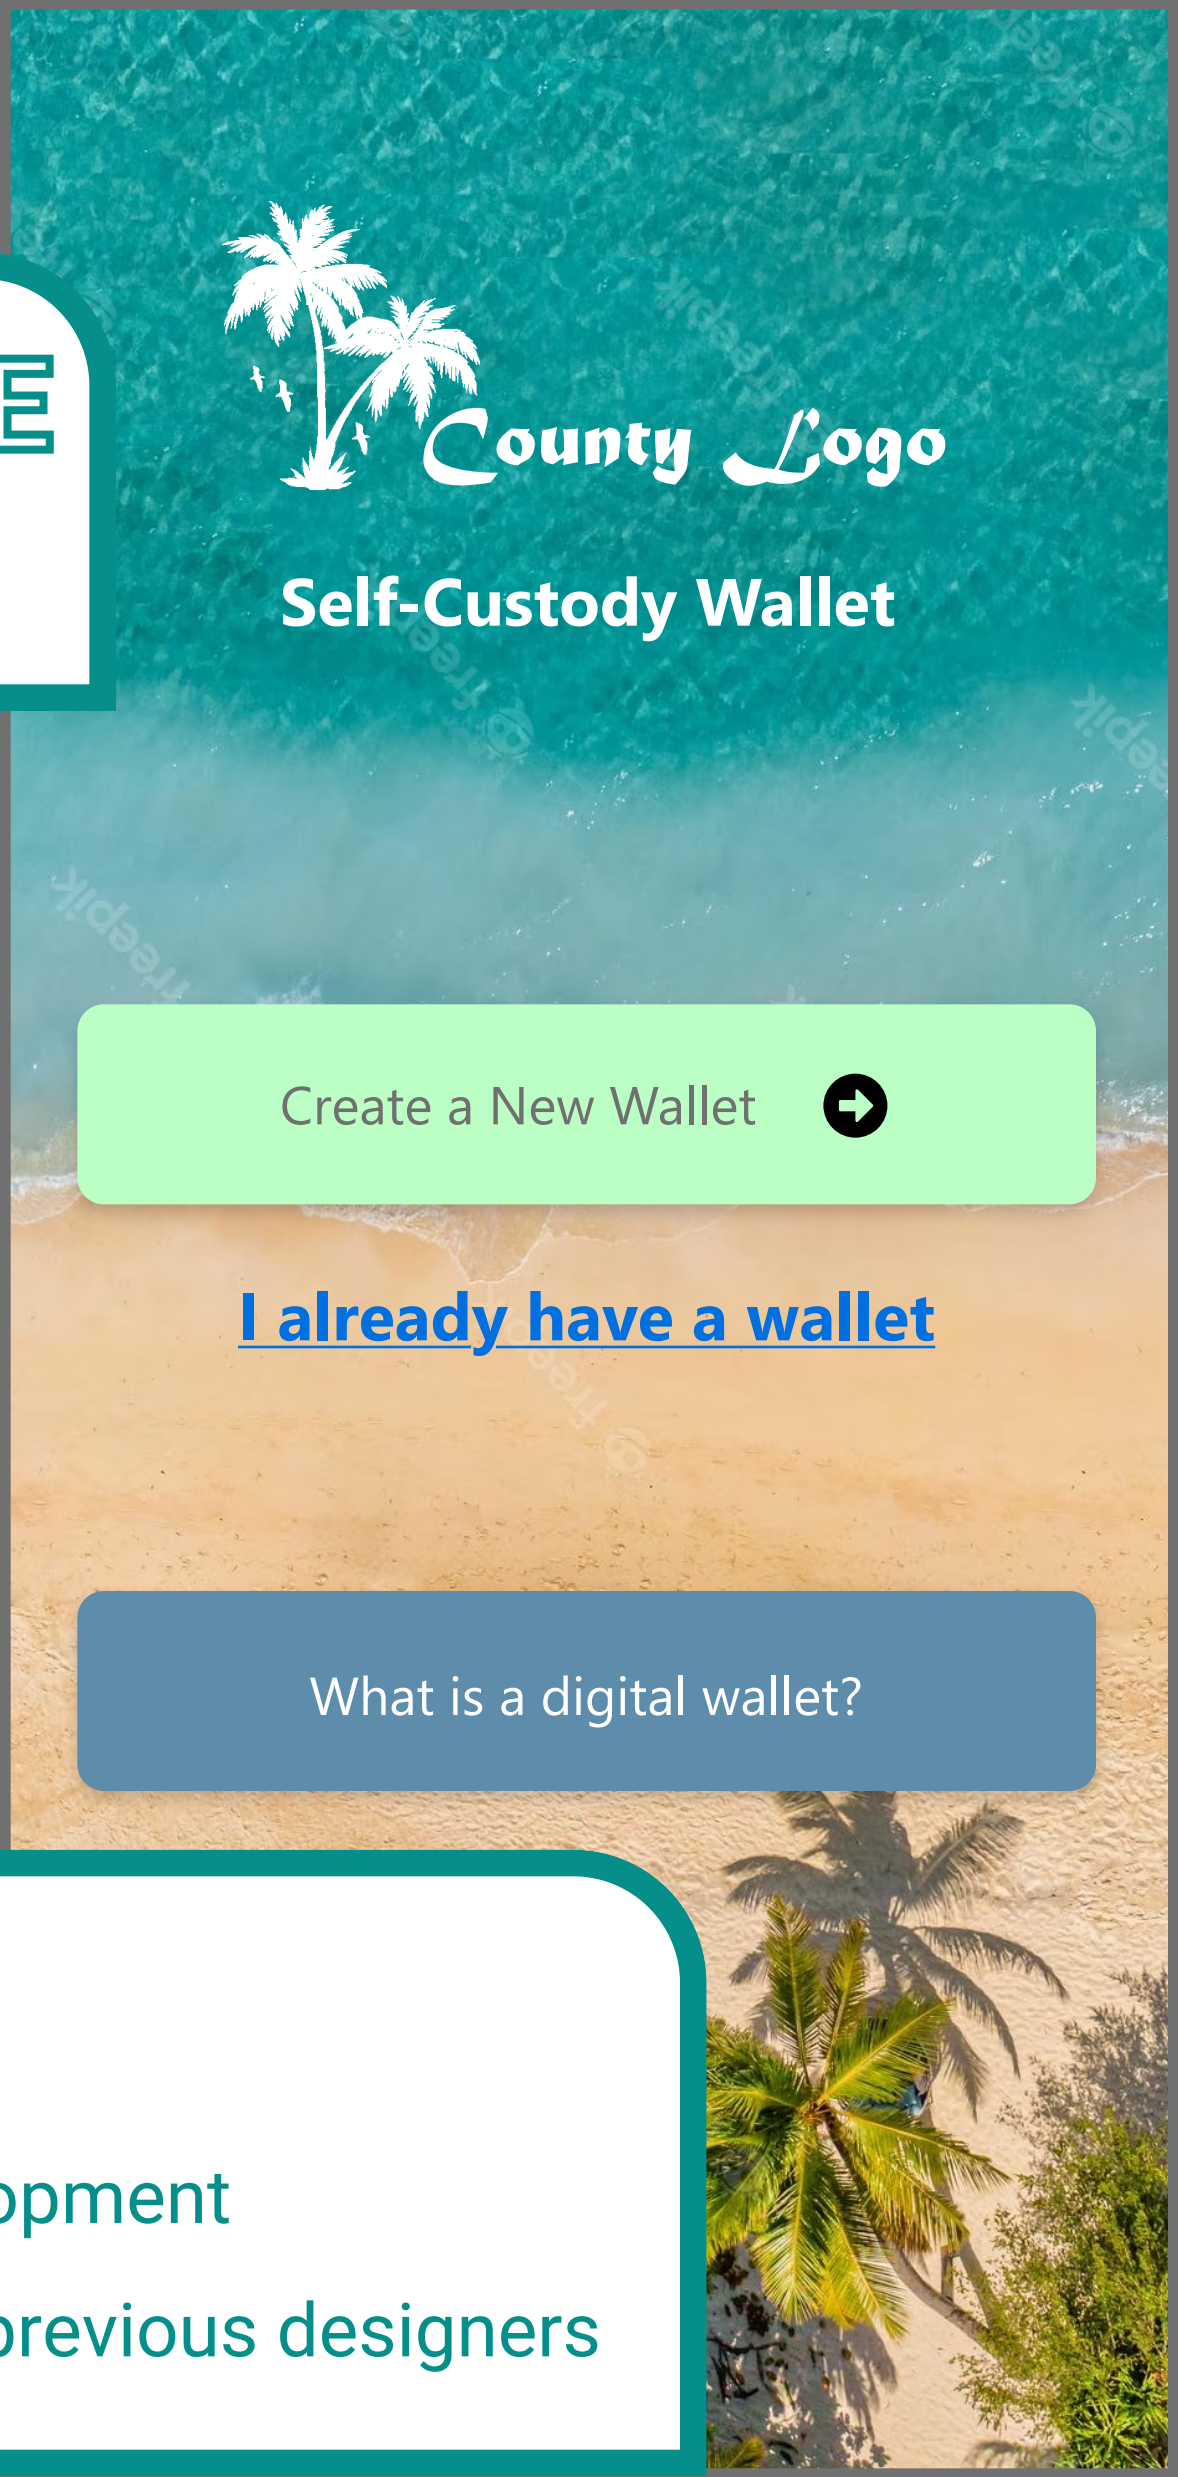

With little guidance, nor access to users, designs were based on limited background information from the lead developer, project lead, and one previous UX designer.

The designs focus on the ability to login as well as add and share user credentials with a government entity such as FEMA. FEMA would then verify user credentials and add funds to their digital wallet. While the app may be simple, it started a truly powerful conversation on how to help people in times of need.

*More designs of this project available on request.*

## MY ROLE

UX Designer

## ACTIVITIES

- Create UX designs for later development
- Collaborate with developers and previous designers
